

## **October 22, 2003--Faus Interplank Design™ and Microbevel™**

Faus Group Introduces the two latest design and technology innovations in laminate flooring.

Dalton GA- Faus Group introduces the two latest design and technology innovations in laminate floor: InterPlank Design™ and Microbevel™.

InterPlank Design™ is a combination of two planks that completes one continuous woodgrain strip. It features a Self-Alignment System™ which is an automatic continuation of the pattern between planks. This allows fast and easy installation of the floor.

Microbevel™ technology embosses a subtle micro bevel between each laminate wood strip providing more depth and realism to the floor. This technology aids in making laminate joints less visible, resulting in an authentic finished appearance.

Both InterPlank Design™ and Microbevel™ combine with Faus Embossed-In-Register® and Joint Guard® to create laminate flooring with a natural look of genuine hardwood never before seen in the industry.

For more information on InterPlank Design™ and Microbevel™ visit our web site at [www.interplank.com](http://www.interplank.com) and [www.microbevel.com](http://www.microbevel.com) • Ph -1-888-231-3287. Visit our booth #1920 at Surfaces 2004.
